3. Macroeconomic environment

The world economy has been registering a significant loss of dynamism, because of a series of adverse factors which have led to a downward revision of economic growth estimates for 2022 and 2023.

The forecasts published at the end of November by the OECD, subject to high uncertainty, confirm expectations of a slowdown. By 2022, the world economy is estimated to have recorded an increase in output of 3.1%, compared with 5.9% in the previous year. By 2023, the GDP growth rate is expected to moderate to 2.2%, rebounding to 2.7% in 2024. In the Eurozone, GDP is forecast to increase by 3.3% in 2022 and by 0.5% in 2023.

Inflation has played a major role in this process of economic slowdown. In both the US and the Eurozone, price increases have reached 10%, although they have moderated in recent months. The rise in energy prices and the war in Ukraine have been main triggers for the increase in inflation.

European states have tried to cushion the impact of the energy shock, on households and businesses, with fiscal policy measures: fuel and electricity price subsidies, compensation for households and vulnerable sectors, consumption limitations and recommendations, reductions in public transport fares, etc. Changes have also been made to the pricing mechanisms in wholesale energy markets.

Central banks, in their attempt to anchor inflation expectations to their medium-term targets, have tightened monetary policy by raising interest rates. In the US, the interest rates are in the target range of 4.25-4.50%. In the European Union, the ECB's intervention rate is 2.5%, while the marginal lending is 2.75% and the deposit rate is 2.0%. The rate hike has been accompanied with the withdrawal of stimuli through the end of net purchases under the PEPP and APP programmes,

and changes in the remuneration of reserves and in the conditions applied in TLTRO III operations. This is having a decisive influence on financing conditions. The ECB will announce at its February meeting the characteristics of the reduction in holdings of securities under the APP programme. Also, It will stop reinvesting the principal of maturing securities, following the decision taken on 1 July to end net purchases.

Spanish economic situation

The international context and inflationary pressures are also weighing on the Spanish economy.

In the fourth quarter of 2022, the GDP recorded a quarter-on-quarter growth of 0.2%, well below the 2.2% recorded in the second quarter. In year-on year terms, growth stood at 2.7%, down from 4.8% in the previous quarter, due to the deterioration in the contribution of external demand and the moderation in the growth of household consumption. The latter is partially sustained by the savings accumulated during the pandemic.

Labour market indicators point in the same direction. Over the year, employment has been created at a remarkable pace. In December, Social Security enrolment increased by 12,640 people, much lower than the figure usually recorded in that month.

The different measures taken to contain inflation have help to bring it down to 5.8% (as of January 2023), the lowest of the Eurozone countries. Nevertheless, food prices continue to rise, resulting in a strong rebound in core inflation, up to 7.5% (as of January 2023).

The housing market continues to show remarkable strength. Although there has been a certain slowdown in recent months, due to the

exhaustion of the expansionary cycle and the rising cost of financing, the cumulative number of transactions continue growing. Both strength of demand and limited supply have continued to be reflected in prices, which, in the third quarter increased in year-on-year terms by 7.6% (7.8% for used houses and 6.8% for new houses).

Within this framework, financing granted to households and companies has remained stable, growing 0.9% and 0.4% respectively year on year (as of November 2022). The rise in interest rates has not affected significantly to the remuneration of deposits. The latter have varied, by -1.8% year-on-year in the corporate sector and +4.6% in the case of households (as of December 2022).

In this context the Spanish economy has grown 5.5% during 2022. However, the Bank of Spain expects a sharp deceleration, to 1.3% for 2023, following the lower contribution of external demand and household consumption, in the face of rising prices and interest rates. Although prices are expected to moderate gradually, average inflation is projected to stand at 4.9% in 2023, before stabilising at 2% in 2025.

Financial Sector

The recent evolution of activity, and expectations point to an improvement in the performance of financial institutions, given the turnaround in interest rates. However, this improvement will depend on how macroeconomic risks may affect the financial positions of households and firms.

The repricing of floating-rate credit portfolios and the new credits at higher rates will increase margins obtained by banks, although other negative impacts must be taken into account, such as: 1) the possible contraction in the demand for credit in an environment of economic slowdown and lower real incomes in the private sector; 2) the financing coste increase in both retail and wholesale markets; 3) the change in the financial conditions of TLTRO III; 4) the downward revision of the valuations of fixed income portfolios available for sale; 5) the increase in operating

costs, considering that high inflation will lead to wage updates and higher costs of goods and services; 6) additional provisions to cover potential impairments; 7) the cost of the programme adopted to alleviate financial pressure on vulnerable households, and households at risk of vulnerability; and 8) the implementation of the temporary tax levy on interest margin and fees.

The forthcoming EBA stress tests will assess the resilience of banks given the complex and extremely uncertain environment. The results of the tests will be published in the summer of 2023.

Source: Consolidated Balance Sheet (PC1 statement of the Bank of Spain).

Consolidated balance sheet reaches €98,987 million after shrinking by 12.4% in the fourth quarter, and by 14.3% during the year, due to a reduction in the interbank positions.

In November, the TLTROs programme funding has been partially redeemed, after a change in conditions meaning its rate brought into line with the deposit marginal facility.

Financial assets at amortized cost decreased by 2.5% in the fourth quarter.

The securities portfolio is mainly composed of government bonds, classified in the amortized cost portfolio (*debt securities at amortized cost*). Its size increased by 8.1% in the last year, mainly

by purchases of Spanish government bonds. Its average yield stands at 1.93% at the end of the year.

Hedging derivatives mainly record interest rate risk coverages of assets at amortized cost.

Non-current assets held for sale continued to perform positively. They decline by 5.4% during the fourth quarter, and by 20.2% throughout the year.

Customer deposits also contracted seasonally in the fourth quarter by 4.4%, mainly due to the amortization of multi-cedent covered bonds and lower repo balances.

The volume of total customer funds amounts to €90,081 million, after increasing by 0.3% in the fourth quarter, in a macroeconomic context not very favourable for savings, characterized by high inflation and high volatility in the financial markets.

Rising interest rates are making term savings products more attractive again, halting the steady decline of recent years.

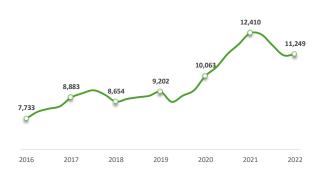

Off-balance sheet products increased by 0.6% in the last quarter, with the launch of a long-term investment products, which ensure return at maturity. Mutual funds depreciated nearly 9% year-on-year, with positive net subscriptions in the first half, negative in the second half and close to zero for the year.

Retail Funds sector and product breakdown

€500 million of non-preferred senior green debt were issued, maturing in November 2027, with cancelling option by the Bank at the end of the fourth year.

The off-balance sheet products (directly investing in fixed income and equities) are being transitioned into ESG products. At the end of 2022, 42% of these products had this qualification, a percentage expected to rise to over 80% by the end of the first half of 2023.

The performing loans portfolio amounted to €52,953 million. It maintains a low risk profile, with a high weight of mortgages to individuals (60% of the total) and loans to public sector (11% of the total).

Throughout the year, €10,049 million of new loans and credits were granted. This includes €4,313 million in mortgages.

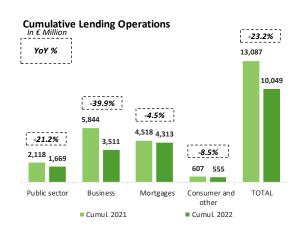

The market share of new mortgages stands at 8.0% of the national total (source: General Council of Notaries. Data as of November 2022, accumulated over the last 12 months).

Around 60% of the household mortgage portfolio is indexed to a variable rate, a proportion that rises to around 70% considering the existence of hedges.

The credit granting to companies has slowed down in 2022, mainly due to the liquidity stockpiling carried out by companies in 2021 thanks to the ICO lines. 15% of the corporate loan portfolio is guaranteed by this institution.

Non-performing loans decreased by €14 million in the fourth quarter of 2022, down to €1,938 million.

More than half of the NPL entries in 2022, are due to subjective reasons. NPLs for subjective reasons represent 35% of stage 3 portfolio.

The NPL ratio remains stable at 3.5% and coverage reaches 67% after significant extraordinary impairments. During the fourth quarter amount c.€50 million of impairment were recorded, in

addition to those resulting of the application of internal provisioning models. These are destinated to prevent the possible economic deterioration that high inflation rates could cause in the coming years.

The NPL entries due to subjective reasons reduce the coverage ratio, as they are non-default operations or with insignificant defaults, which therefore require few provisions, impacting the average coverage.

The balance of foreclosed assets stands at €1,833 million, provisioned with €1,175 million, resulting in a net balance of €658 million, 0.7% of the Group's total assets.

Foreclosed assets sales amounted to €584 million. Sales recorded positive results and are distributed among housing (54% of the total), land (34% of the total) and tertiary sector assets and construction work-in-progress (12% of the total).

Annual decline in foreclosed assets was moderated by the reclassification in December of a €57 million portfolio (net book value) of investment property. In the current context of rising interest rate, the profitability of this portfolio has decreased, so it will be sold.

Foreclosed assets gross value declined by 2.8% during the quarter and by 17.0% in the last twelve months. The coverage level stands at 64.1% (among the highest in the sector in Spain).

In addition, €151 million of gross assets classified as investment property were sold in 2022, also with positive results.

A wholesale portfolio of assets classified as NCAHS and Investment property, amounting €171 million was sold in the fourth quarter, with €55 million still to be derecognized, pending the fulfilment of certain conditions in January.

NPAs declined by €67 million in the fourth quarter, and by €398 million in the last twelve months (-9.6%) with coverage level standing at 65%.

14. Digital Plan

During the last quarter, the focus was set on the implementation and development of the Digital Plan, included in the 2022-2024 Strategic Plan. New digital capabilities have been implemented and the digital offer has been scaled an customized.

The digital platform has been enhanced with new assets, advancing in the Open Banking strategy with the payment aggregator and initiator, already available for households and companies.

A 100% digital mortgage platform has been developed, as well as the digital onboarding of the "SIN" online account and the digital journeys for the main products of the Bank.

The partnership plan continues to be developed with agreements in the alarm sector (SICOR and ADT), within the ecosystem of home related services.

Appendix I:

ALTERNATIVE PERFORMANCE MEASURES (APM)

The information contained in this Appendix is prepared in accordance with the International Financial Reporting Standards adopted by the European Union (EU-IFRS). In addition, Unicaja Banco Group considers that certain Alternative Performance Measures (APM), as defined in the Directive on Alternative Performance Measures issued by the European Securities Market Authority (ESMA) on 5th October 2015 (ESMA / 2015 / 1415en), provide additional information that may be useful for analysing the Group's financial performance.

The Group considers that the APMs included in this appendix comply with ESMA Guidelines. These APMs have not been audited and in no way are a substitute for the financial information prepared under IFRS. Likewise, the definition that the Group uses of these APMs may differ from other similar measures calculated by other companies and therefore may not be comparable.

Following the recommendations of the aforementioned Guidelines, the breakdown of the APMs used by Unicaja Banco Group is attached below, including the definitions and matching items of the balance sheet, income statement and notes to the consolidated financial statements used by the Unicaja Banco Group on its annual or interim financial statements:
